

Find the area and perimeter of a square

Algorithm

Step 1: start

Step 2: Read a

Step 3: Area = $a \times a$

Step 4: Perimeter = $4 \times a$

Step 5: Print Area and Perimeter

Step 6: stop

Flowchart

Convert the given days into years and months
Algorithm

Step 1: Start

Step 2: Input number of days

Step 3: Calculate the number of years.
 $\text{years} = \text{days} / 365$

Step 4: Calculate the remaining days after calculating years.
 $\text{remaining days} = \text{days} - \text{years} \cdot 365$

Step 5: Calculate the number of months
 $\text{months} = \text{remaining days} / 30 = 2$

Step 6: Calculate the remaining days after calculating months.

$\text{Days left} = \text{remaining days} \% 30$

Step 7: Output the years, months, days left

Step 8: End

Flowchart

check whether given no is Prime or not

Algorithm

Step 1 :- Take num as input

Step 2 :- Initialize a variable temp as 0.

Step 3 :- Iterate a "for" loop from 2 to $\text{num}/2$

Step 4 :- If num is divisible by loop iterator then increment temp.

Steps :- If the temp is equal to 0,
return Num is prime.

else

Return num is not prime

Flowchart

(Q)

Palindrome

Algorithm

Step 1: - Start

Step 2: - Read n

Step 3: - Initially e

set $original = n$ & $reversed = 0$

Step 4: - while $n > 0$

set $digit = n \bmod 10$

update $reversed =$

$reversed \times 10 + digit$

Step 5: - if $original = reversed$

Print "Palindrome"

Step 6: - else

Print "not Palindrome"

Flowchart

Sum of Digits

Algorithm

Step 1: - start

Step 2: - Input the number (n)

Step 3: - Initialize
 $sum = 0$

Step 4: - Repeat the following steps while
 n is greater than 0 $n > 0$
- extract the last digit of n
 $digit = n \% 10$
- Add the digit to sum!
 $sum = sum + digit$
- remove the last digit from n

Step 5: - o/p The sum $n = n // 10$

Step 6: - end.

flowchart

Leap Year

Algorithm:

Step 1:- Start

Step 2:- Read year

Step 3:- check if $\text{year} \% 4 == 0$, else go to step 5

Step 4:- Print leap year

Step 5:- Print not leap year

Step 6:- Stop
